E-0600 WATER DISTRIBUTION TUBE ASSEMBLIES
Installation Instructions

1. Before installing the new water distribution tube assembly, a hole plug (supplied) must be inserted into one of two 1/4” diameter holes in the tube.
2. To determine which hole to plug, look to see which style water distribution tube mounting bracket is in the machine.
3. If the mounting bracket supporting the tube is stainless steel, plug the hole closest to the row of smaller holes.
4. If the bracket is made of a white plastic material, plug the hole farthest away from the row of smaller holes.
5. Mount the water distribution tube over the centering pin (see figures below).
