K00035/K00036 TRI-LIMINATOR FILTER REPLACEMENT, SHORT TYPE (31 1/2” LONG)

Installation Instructions

Tri-liminator units in the field having the longer water filter (37 3/4”) are being replaced by the shortened type (31 1/2”). In order to mount this filter (short type) to the mounting base, the existing filter support bracket will require relocation. The bracket must be moved up approximately 3 1/16”, as shown on the illustration below. Two filter clamps are to be reused for fastening the water filter to the mounting base. Apply tubing assemblies at inlet and outlet ends, as shown.

NOTE: When replacing a red-capped filter, replace the 4” long mounting bolts with the 5” long bolts provided.
