7621543 SIPHON TUBE ASSEMBLY

Replacement Instructions

1. The location of the siphon mounting holes may have to be changed on water and remote machines. The holes should be located 2 3/8" and 4 3/8" from the bottom of the rear panel. If the holes are not located at these dimensions, drill two 5/32" diameter holes in these locations.
2. If the old siphon did not have a bracket welded on, remove the two old brackets from the rear panel. If the machine is a water or a remote air-cooled machine, drill two holes, as described above. Replace siphon label with the one included in the kit and set siphon, as described on the new label.
