WATERPROOF SWITCH/BRACKET REPLACEMENT

Installation Instructions

Adjust the switch by sliding the switch bracket forward or backward, while activating the dispensing arm, until the switch is positioned so that it makes (closes) just before the arm bottoms out against the front panel. This will assure that undue pressure is not put on the switch.

If this switch is being installed on a dispenser that does not have a mechanical or mercury relay to carry the gear motor load, a relay of sufficient size must be added. Note: This switch is not rated for gear motor amps.
