FOAM TAPE AND FRONT PANEL THUMBSCREWS INSTALLATION FOR MARINE CUBE AND FLAKE ICE MACHINES

Foam Tape Installation for Marine Cube Ice Machines Only:

1. Remove front panel.
2. Lift front of machine and remove bracket.
3. Apply tape to bracket, as shown below.
4. Lift front of machine and place bracket back into original position.
5. Replace front panel.

Front Panel Thumbscrews Installation for Marine Cube and Flake Ice Machines

For marine ice machines, the Phillips head screws that secure the front panel must be replaced with the supplied thumbscrews. This is to facilitate cleanability and to meet the requirements of the Vessel Sanitation Program. Remove the Phillips head screws and insert thumbscrews in front panel holes. Attach supplied black rubber retaining rings over each end of the thumbscrews on the backside. Reassemble front panel to ice machine.
