WATER DISTRIBUTION TUBE ASSEMBLIES

FOR E-0400 ICE MACHINES

Installation Instructions

1. Before installing the new water distribution tube assembly, a hole plug (supplied) must be inserted into one of two 1/4” diameter holes in the tube.
2. To determine which hole to plug, look to see which style water distribution tube mounting bracket is in the unit.
3. If the mounting bracket supporting the tube is stainless steel, plug the hole closest to the row of smaller holes.
4. If the bracket is made of a white plastic material, plug the farthest away from the row of smaller holes.
5. Mount the water distribution tube over the centering pin (see illustration).
