Manitowoc®
ICE MACHINES & REACH-INS

Installation instructions for K101 light merchandiser

1.) Disconnect electrical power to dispenser before beginning installation.
2.) Remove upper front panel on dispenser by removing the two(2) existing screws.
3.) If dispenser doesn't have prepunched holes to mount light merchandiser as shown in figure 1, then drill three(3) 0.156 dia. holes (as shown on left panel) and two(2) 0.125 dia. holes on left and right side panels. (see fig. #1).
4.) Fasten spacer using the two(2) #8 x 1.50 sheet metal screw (see fig. #2).
5.) Mount lighted front panel to dispenser as shown in fig. #2 using the three(3) #10–24 screws.(note: hinge to be located against top edge of trim as shown)
6.) After cleaning surface with a degreaser (alcohol), locate velcro vertically on right side of dispenser.
7.) Remove drain pan by pulling foward while lifting up on front edge.
8.) Remove cover from dispenser control box (box with wiring diagram on front cover).
9.) Route wiring from lighted panel down behind lower front panel and into control box from the left side through the existing bushing supplied in the control box. (if control box has no holes with a bushing supplied, route wiring through hole in rear of control box where the main power cord is routed).
10.) Remove wire nuts and rewire the new leads matching colors with the existing leads from the main power cord. The green ground wire must be connected to the green grounding screw inside the control box.
11.) Reinstall cover on control box.
12.) Reinstall drain pan. This can be made easier by lubricating inside the rubber fitting that the drain inserts into and drain stub on the plastic drain pan using a petroleum jelly (vaselene) (see fig. #3).
