COIN-OPERATED DISPENSER
REPLACEMENT WIRING HARNESS
Installation Instructions

WARNING - Failure to follow the instructions listed below may result in electrical shock.

Disconnect electrical power to the dispenser before proceeding.

1. Remove old wiring harness from coin mechanism and control box (cut terminals off old wiring harness and return with labor claim form).
2. Position three wiring clips, **as shown on drawing**: Clip 1 - mount the adhesive-backed clip to the inside bottom front cover of coin box assembly. Clip 2 - must be mounted with loop toward the coin mechanism (note, if previously installed, you may have to rotate 180° to assure loop is toward coin mechanism). Clip 3 - mount with loop away from coin mechanism.
3. Install new wiring harness, making sure that wiring is routed, **as shown on drawing**. Route wire through coin box assembly first. Three wire clips must be installed.
4. Install bracket to coin mechanism, using supplied washers, to allow free movement of coin mechanism.
