WATER LEVEL KIT

Installation Instructions

This kit replaces the float valve, float valve bracket, and discharge tube on QM45/Q-0130/Q-0210/Q-0270 undercounter ice machines with a serial number earlier than 110300000 (November, 2003).

1. Disconnect power to the ice machine.
2. Disconnect water supply to ice machine.
3. Remove the following parts:
   A. Water pump discharge tube
   B. Water pump
   C. Float valve
   D. Float valve bracket

3. Install new float valve bracket and float valve.
4. Pull straight up on overflow tube cap and remove.
5. Install water pump and water pump discharge tube.
6. Reconnect water and electrical supply.
7. Place toggle switch in "ICE" position.
8. Raise or lower water float valve bracket until water level is 1/4" to 3/8" below top of standpipe and then tighten screws.
9. Replace overflow tube cap.
