S-Model Guardian®

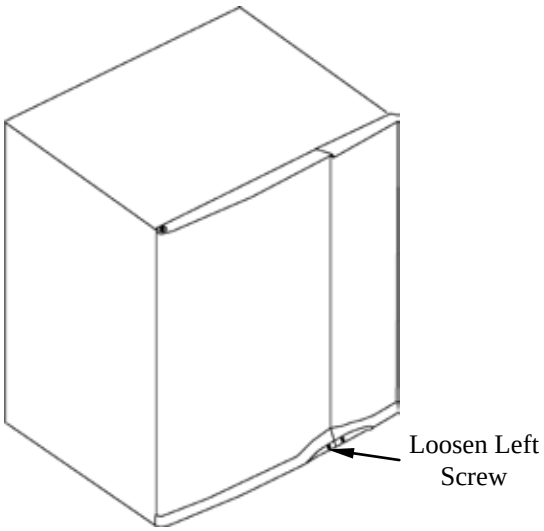

Installation Instructions

Slime is a leading cause of ice machine breakdowns, and biological growth is a health concern. The Guardian® system releases chlorine dioxide on a controlled basis to inhibit the growth of bacteria and fungi that form slime and cause malodors in the food zone of ice machines. The Guardian® will not control mineral or other water borne buildup. Your water quality will determine the length of time before mineral buildup affects ice machine performance. Mineral buildup must be removed as often as necessary to ensure trouble-free operation of the ice machine.

INSTALLATION

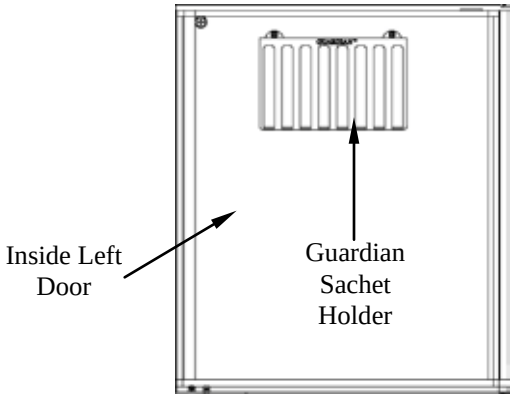

A sachet holder is included with these sachet packets; install the sachet holder in the inside of the front panel, if one is not present.

1. Loosen the left screw and open the left front door. The right front panel does not need to be removed.

2. Inside the front panel are two thumbscrew holes covered by stickers; pierce the sticker with a screwdriver.

3. Attach the sachet holder to the front panel by inserting the thumbscrews through the holes in the sachet holder and tightening the thumbscrews.

4. Remove the new sachet packet from the foil package and install into holder. Removing the foil package allows moisture in the air to activate the sachet contents.
5. Close the left front door and tighten the screw.
