Technician's Handbook

Part Number 000015433_05 3/21

Safety Notices

Read these precautions to prevent personal injury:

- Read this manual thoroughly before operating, installing or performing maintenance on the equipment. Failure to follow instructions in this manual can cause property damage, injury or death.
- Routine adjustments and maintenance procedures outlined in this manual are not covered by the warranty.
- Proper installation, care and maintenance are essential for maximum performance and trouble-free operation of your equipment.
- Visit our website www.manitowocice.com for manual updates, translations, or contact information for service agents in your area.
- This equipment contains high voltage electricity and refrigerant charge. Installation and repairs are to be performed by properly trained technicians aware of the dangers of dealing with high voltage electricity and refrigerant under pressure. The technician must also be certified in proper refrigerant handling and servicing procedures. All lockout and tag out procedures must be followed when working on this equipment.
- This equipment is intended for indoor use only. Do not install or operate this equipment in outdoor areas.
- As you work on this equipment, be sure to pay close attention to the safety notices in this handbook. Disregarding the notices may lead to serious injury and/or damage to the equipment.

⚠ Warning

Follow these electrical requirements during installation of this equipment.

- All field wiring must conform to all applicable codes of the authority having jurisdiction. It is the responsibility of the end user to provide the disconnect means to satisfy local codes. Refer to rating plate for proper voltage.
- This appliance must be grounded.
- This equipment must be positioned so that the plug is accessible unless other means for disconnection from the power supply (e.g., circuit breaker or disconnect switch) is provided.
- Check all wiring connections, including factory terminals, before operation. Connections can become loose during shipment and installation.

⚠ Warning

Follow these precautions to prevent personal injury during installation of this equipment:

- Installation must comply with all applicable equipment fire and health codes with the authority having jurisdiction.
- To avoid instability the installation area must be capable of supporting the combined weight of the equipment and product. Additionally the equipment must be level side to side and front to back.
- Remove all removable panels before lifting and installing and use appropriate safety equipment during installation and servicing. Two or more people are required to lift or move this appliance to prevent tipping and/or injury.
- Do not damage the refrigeration circuit when installing, maintaining or servicing the unit.
- Connect to a potable water supply only.
- This equipment contains refrigerant charge.

⚠ Warning

Follow these precautions to prevent personal injury while operating or maintaining this equipment.

- Refer to nameplate to identify the type of refrigerant in your equipment.
- Only trained and qualified personnel aware of the dangers are allowed to work on the equipment.
- Read this manual thoroughly before operating, installing or performing maintenance on the equipment. Failure to follow instructions in this manual can cause property damage, injury or death.
- Crush/Pinch Hazard. Keep hands clear of moving components. Components can move without warning unless power is disconnected and all potential energy is removed.
- Moisture collecting on the floor will create a slippery surface. Clean up any water on the floor immediately to prevent a slip hazard.

⚠ Warning

Follow these precautions to prevent personal injury while operating or maintaining this equipment.

- Objects placed or dropped in the bin can affect human health and safety. Locate and remove any objects immediately.
- Never use sharp objects or tools to remove ice or frost.
- Do not use mechanical devices or other means to accelerate the defrosting process.
- When using cleaning fluids or chemicals, rubber gloves and eye protection (and/or face shield) must be worn.

⚠ DANGER

Do not operate equipment that has been misused, abused, neglected, damaged, or altered/modified from that of original manufactured specifications. This appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision concerning use of the appliance by a person responsible for their safety. Do not allow children to play with, clean or maintain this appliance without proper supervision.

⚠ Warning

Follow these precautions to prevent personal injury during use and maintenance of this equipment:

- It is the responsibility of the equipment owner to perform a Personal Protective Equipment Hazard Assessment to ensure adequate protection during maintenance procedures.
- Do Not Store Or Use Gasoline Or Other Flammable Vapors Or Liquids In The Vicinity Of This Or Any Other Appliance. Never use flammable oil soaked cloths or combustible cleaning solutions for cleaning.
- All covers and access panels must be in place and properly secured when operating this equipment.
- Risk of fire/shock. All minimum clearances must be maintained. Do not obstruct vents or openings.
- Failure to disconnect power at the main power supply disconnect could result in serious injury or death. The power switch DOES NOT disconnect all incoming power.
- All utility connections and fixtures must be maintained in accordance with the authority having jurisdiction.
- Turn off and lockout all utilities (gas, electric, water) according to approved practices during maintenance or servicing.

- Warranty labor claim form

WWW.MANITOWOCICE.COM/SERVICE/WARRANTY#WARRANTY-REGISTRATION

Model/Serial Number

These numbers are required when requesting information from your local Manitowoc Distributor, or Manitowoc Ice. The model and serial number are listed on the MODEL/SERIAL NUMBER DECAL affixed to the ice machine.

Manitowoc Cleaner/Descaler and Sanitizer

Manitowoc Ice Machine Cleaner/Descaler and Sanitizer are available in 16 oz. (473 ml) bottles. These are the only cleaner and sanitizer approved for use with Manitowoc products.

Cleaner/Descaler Part Number		Sanitizer Part Number	
16 oz.	000000084	16 oz.	9405653
1 gal	N/A	1 gal.	9405813

Installation

Installation Requirements

The location selected for the ice machine must meet the following criteria. If any of these criteria are not met, select another location.

- Air temperature - Minimum 50°F (10°C), Maximum 110°F (43°C)
- The location must be free of airborne and other contaminants.
- The location must not be near heat-generating equipment or in direct sunlight.
- The location must be capable of supporting the weight of the ice machine and a full bin of ice.
- The location must allow enough clearance for water, drain and electrical connections in the rear of the ice machine.
- The location must not obstruct airflow through or around the ice machine.
- The ice machine and bin must be level.
- Routine adjustments and maintenance procedures outlined in this manual are not covered by the warranty.

Potable Water Requirements

- Plumbing must conform to local codes.
- Water temperature: Minimum 37°F (3°C), Maximum 90°F (32°C).
- Do not connect the ice machine to a hot water supply. Be sure all hot water restrictors installed for other equipment are working. (Check valves on sink faucets, dishwashers, etc.)
- If water pressure exceeds maximum pressure (80 psig [552 kPa] obtain a water pressure regulator.
- A water shut-off valve is required to clean the ice machine.
- A union for both the ice making and condenser water lines is required.
- Water inlet lines require insulation to prevent condensation.
- When local code requires, a back flow preventer must be installed on the water inlet line.

Drain Connections

- Drain lines must have a 1.5 inch drop per 5 feet of run (2.5 cm per meter), and must not create traps.
- The floor drain must be large enough to accommodate drainage from all drains.
- Bin drain termination must have an air gap.
- Separate insulated bin and water-cooled condenser drain lines are required.
- The bin and ice machine drains must be run separately.

Ice Machine Clearance Requirements

All Models Clearance Requirements	
Back	5” (12.7 cm)
Sides/Top	8” (20.3 cm)

RCUF Units	Remote Condensing Unit
Front/Back	24” (61.0 cm)
Sides/Top	6” (15.2 cm) 24 inches clearance on top and sides is recommended for serviceability

NOTE: Allowance must be made for removal when the ice machine is built-in. Removal of the top panel is required for cleaning and sanitizing.

Cooling Tower Applications

A water cooling tower installation does not require modification of the ice machine. The water regulator valve for the condenser continues to control the refrigeration discharge pressure.

It is necessary to know the amount of heat rejection, and pressure drop through the condenser and water valves (inlet and outlet) when using a cooling tower on an ice machine.

- Water entering the condenser must not be lower than 37°F (3°C) or exceed 90°F (32°C).
- Water flow through the condenser must not exceed 5 gal. (19 L) per minute.
- Allow for a pressure drop of 7 psi (48 kPa) between the condenser water inlet and the outlet of the ice machine.
- Water exiting the condenser must not exceed 110°F (43°C).
- Water entering the condenser must not exceed 150 psi (10 bar).

Electrical Service

⚠ Warning

All wiring must conform to local, state and national codes.

VOLTAGE

The maximum allowable voltage variation is ± 10% of the rated voltage on the ice machine model/serial number plate at compressor start-up.

FUSE/CIRCUIT BREAKER

A separate fuse/circuit breaker must be provided for each ice machine. Circuit breakers must be H.A.C.R. rated (does not apply in Canada).

⚠ Warning

The ice machine must be grounded in accordance with national and local electrical codes.

GROUND FAULT INTERRUPTER CIRCUIT (GFIC)

A GFCI/GFI circuit protection is not recommended with our equipment. If a GFCI/GFI is required by code a GFCI/GFI breaker rather than outlet must be used to avoid intermittent nuisance trips.

Maximum Breaker/Minimum Circuit Amperage Chart

NOTE: Due to continuous improvements, this information is for reference only. Please refer to the ice machine serial number tag to verify electrical data. Model/Serial tag information overrides information listed on these pages.

Cleaning and Sanitizing

Maintenance procedures covered in this manual are not covered by the warranty.

⚠ Caution

Use only Manitowoc approved Ice Machine Cleaner/Descaler (part number 000000084) and Sanitizer (part number 9405653). Do not mix Cleaner/Descaler and Sanitizer solutions together. It is a violation of Federal law to use these solutions in a manner inconsistent with their labeling. Read and understand all labels printed on bottles before use.

⚠ Warning

Wear rubber gloves and safety goggles (and/or face shield) when handling ice machine Cleaner or Sanitizer.

EXTERIOR CLEANING

Remove dust and dirt off exterior surfaces with mild household dish-washing detergent and warm water. Wipe dry with a clean, soft cloth.

DETAILED DESCALING AND SANITIZING PROCEDURE

This procedure must be performed once every 6 months.

- All ice must be removed from the bin
- The ice machine and bin must be disassembled descaled and sanitized
- The ice machine produces ice with the cleaner/descaler and sanitizer solutions
- All ice produced during the descaling and sanitizing procedure must be discarded

Detailed Descaling and Sanitizing Procedure

Use Ice Machine Cleaner/Descaler part number 000000084.

Use Ice Machine Sanitizer part number 9405653.

Step 1 Remove front and top covers and set the toggle switch to the OFF position.

Step 2 Remove all ice from the bin.

Step 3 Turn off the ice making water supply and drain water from evaporator and reservoir.

Step 4 Remove the top cover from water reservoir.

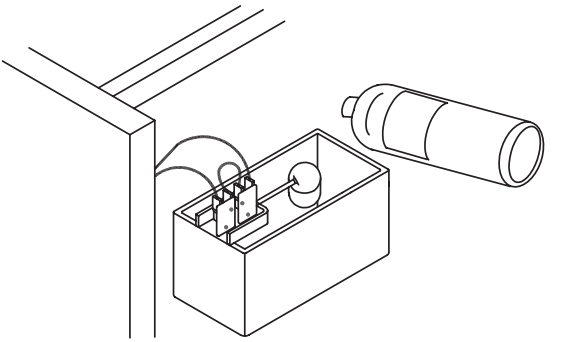

Step 5 Follow the chart and premix cleaner and water.

Amount of Water	Amount of Cleaner/Descaler Part Number 000000084
1 gallon (4 Liters)	3 ounces (90 ml)

Step 6 Fill the evaporator and reservoir with descaling solution.

Important

Prop Float Up to Prevent Low Water Level Shutdown

Step 7 Move the toggle switch to the ON position. The ice machine will make ice with the descaling solution and deposit the ice in the bin. Add the remaining descaler/water solution as the water level in the reservoir drops.

NOTE: Do not allow the descaler/water solution level to drop below the minimum water level. The ice machine will discontinue the cycle if the water float switch opens.

Step 8 After all of the descaler/water solution has been added turn on the ice making water supply. Continue the freeze cycle for 10 minutes to remove the solution from the water circuit.

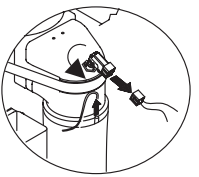

Step 9 Place the toggle switch in the OFF position and turn off the ice making water supply.

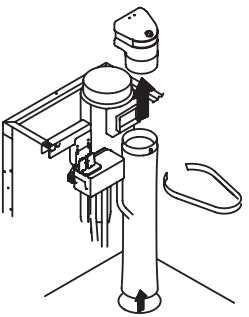

Step 10 Remove the following components for hand descaling and sanitizing for RFF and RNF models.

A. Remove water reservoir cover.

B. Remove microswitch and bin thermostat from the ice chute.

C. Remove retainer, ice chute elbow and ice chute.

D. Hand descale the removed part(s) in a properly mixed solution of descaler and water.

Solution Type	Water	Mixed With
Descaling	1 gal. (4 L)	16 oz (500 ml) Cleaner/Descaler Part Number 000000084

E. Use a soft-bristle brush or sponge (NOT a wire brush) to carefully clean the parts.

F. Use the solution and a brush or sponge to clean all disassembled components and the inside of the bin.

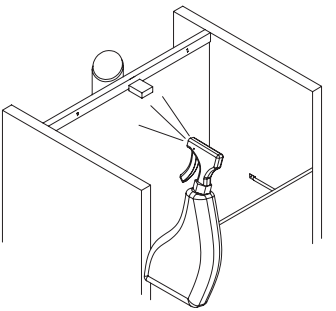

G. Rinse all cleaned parts with clear potable water.

H. Mix a solution of sanitizer and water.

Solution Type	Water	Mixed With
Sanitizer	3 gal. (11 L)	2 oz (60 ml) sanitizer Part Number 94-0565-3

I. Use the sanitizer/water solution and a sponge to sanitize all removed components and the inside of the bin. Do not rinse the sanitized parts.

NOTE: Descale, rinse and spray sanitizer on all interior and exterior areas of the evaporator discharge spout on UFF and UNF models.

Step 11 Reassemble all components removed in step 10 into the ice machine.

Step 12 Refer to chart and premix water and sanitizer.

Amount of Water	Amount of Sanitizer
1 Gallons (4 L) Water	1/2 ounce (15 ml)

Step 13 Fill the evaporator and reservoir with sanitizer/water solution.

Important

Prop Float Up to Prevent Low Water Level Shutdown

Step 14 Move the toggle switch to the ON position. The ice machine will make ice with the sanitizer/water solution and deposit the ice in the bin. Add the remaining sanitizer/water solution when the water level in the reservoir drops.

NOTE: Do not allow the sanitizer/water level to drop below the minimum water level. The ice machine will discontinue the cycle if the water float switch opens.

Step 15 After all of the sanitizer/water solution has been added to the reservoir, turn on the ice making water supply.

Step 16 Continue the freeze cycle for 30 minutes and then discard all ice produced.

Remedial Cleaning Procedure for Heavily Scaled Ice Machines

Perform this procedure if you have some or all of these symptoms.

- Excessive grinding, popping or squealing noises from the evaporator
- Grinding noise from gearbox
- Ice machine trips speed sensor

NOTE: A Cleaning/Sanitizing Procedure must be performed after this procedure.

Procedure to Clean Heavily Scaled Flake Ice Machines

Step 1 Remove front and top covers and set the toggle switch to the OFF position.

Step 2 Remove all ice from the bin.

Step 3 Turn off the ice making water supply.

Step 4 Remove the top cover from water reservoir.

Step 5 Refer to chart and premix cleaner/descaler with lukewarm water in a non-metallic container.

Model	Water Reservoir Capacity	Mix Cleaner/Descaler and Water Use Ice machine cleaner/ descaler, part number 000000084 only	
		Cleaner	Water
UNF0200 UFF0200 UFF0350 UNF0300	14 oz (400 ml)	9 oz (266 ml)	5 oz (148 ml)
RNF0320 RFF0320 RNF0620 RFF0620	17 oz (500 ml)	11 oz (325 ml)	6 oz (177 ml)
RNF1020C RNF1100 RFF1220C RFF1300	34 oz (1 L)	23 oz (680 ml)	11 oz (325 ml)
RNF2000C RFF2200C RFF2500	68 oz (2 L)	46 oz (1.3 L)	22 oz (650 ml)

Step 6 Remove all water from the evaporator and water reservoir. Add the entire descaler/water solution and re-install the reservoir cover.

Leave the descaler/water solution in the evaporator for a minimum of 4 hours.

Step 7 Remove all descaler/water solution from the evaporator and water reservoir.

Step 8 Perform the detailed descaling and sanitizing procedure.

CLEANING THE AIR FILTER AND CONDENSER

⚠Warning

Disconnect electric power to the ice machine at the electric service switch before cleaning the condenser. The condenser fins are sharp. Use care when cleaning them.

Air-Cooled Condenser

Clean the condenser at least every six months. Follow the steps below.

1. Some models have a washable filter. Clean the filter with a mild soap and water solution.
2. Shine a flashlight through the condenser to check for dirt between the fins. Blow compressed air through the condenser fins from the inside or use a commercial condenser coil cleaner. Follow the directions and cautions supplied with the cleaner.
3. Straighten any bent condenser fins with a fin comb.
4. Carefully wipe off the fan blades and motor with a soft cloth. Do not bend the fan blades. If the fan blades are excessively dirty, wash with warm, soapy water and rinse thoroughly.

⚠Warning

If you are cleaning the condenser fan blades with water, cover the fan motor to prevent water damage.

Removal from Service/Winterization

⚠ Caution

If water is allowed to remain in the ice machine in freezing temperatures, severe damage to some components could result. Damage of this nature is not covered by the warranty.

Follow the procedure below.

1. Disconnect the electric power at the circuit breaker or the electric service switch.
2. Turn off the water supply.
3. Disconnect and drain the incoming ice-making water line at the rear of the ice machine.
4. Disconnect drain tubing and drain water into container and discard.
5. Make sure water is not trapped in any of the water or drain lines.
6. Water cooled - Use compressed air to remove all water from the condenser.

THIS PAGE INTENTIONALLY LEFT BLANK

Sequence of Operation

Ice Making Sequence of Operation

NOTE: Flake ice machines use an auger to remove ice from the evaporator. Occasional noises (creaks, groans, squeaks, or pops) are a normal part of the ice making process.

UFF0200/UFF0350/UNF0200/UNF0300 OPERATION

The ice machine will not start until:

A. The rocker switch is moved to “ON”.

B. Ice does not contact the bin thermostat bulb.

C. The water reservoir is full of water.

Placing the toggle switch in the ON position starts the gear motor and refrigeration system. The float valve controls the water inlet valve and water level. The freeze cycle ends when ice contacts the bin thermostat. The ice machine will restart when ice no longer contacts the bin thermostat.

RFF0320 & RNF0320 OPERATION

When the toggle switch is placed in the “ON” position the following controls must be in the closed position before the ice machine will start:

A. Bin Thermostat

B. Ice Chute Safety Switch

C. Low Water Level Switch

D. High Pressure Cut-out Switch

E. Low Pressure Cut-Out Switch

Placing the toggle switch in the ON position starts the gear motor and an 8 minute compressor time delay. The compressor starts and the float valve controls the water inlet valve and water level. The freeze cycle ends when ice contacts the bin thermostat. The ice machine remains off until ice no longer contacts the bin thermostat.

RNF0620/RFF0620/RNF1100/RFF1300/RFF2500 OPERATION

When the toggle switch is placed in the ON position the following controls must be in the closed position before the ice machine will start:

A. Bin Thermostat

B. High Pressure Cut-out Switch

C. Ice Chute Safety Switch

D. Low Pressure Switch

E. Low Water Level Switch

Placing the toggle switch in the ON position starts the gear motor. After 8 minutes of correct rotation, the time delay ends and the compressor starts. The ice machine will continue to make ice until ice contacts the bin thermostat. The ice machine remains off until ice no longer contacts the bin thermostat.

RNF1020C/RFF1220C/RNF2000C/RFF2200C

Remote Air-cooled Condensing Unit Models

When the toggle switch is placed in the ON position the following controls must be in the closed position before the ice machine will start:

A. Bin Thermostat

B. High Pressure Cut-out Switch

C. Ice Chute Safety Switch

D. Low Pressure Switch

E. Low Water Level Switch

Placing the toggle switch in the ON position starts the gear motor. After 8 minutes of correct rotation the time delay ends and the liquid line solenoid valve opens.

- When the refrigerant pressure is high enough to close the low-pressure control the contactor coil energizes and the compressor and condenser fan motor starts.

The ice machine will continue to make ice until ice contacts the bin thermostat and the liquid line solenoid valve closes and the refrigeration system pumps down.

- The refrigerant pressure drops and the fan cycling pressure control opens stopping the.
- When the refrigerant pressure is low enough to open the low pressure control, the contactor coil is de-energized and the compressor and condenser fan motor stop.

The ice machine remains off until ice no longer contacts the bin thermostat.

Ice Production/Quality Check

QUALITY CHECK

Ice quality varies with ambient and water temperatures, and is measured by the amount of water in the ice. Generally speaking, higher incoming water temperature results in lower ice quality. Lower water temperature results in higher ice quality.

ICE PRODUCTION CHECK

NOTE: Ice production checks that are within 10% of the charted capacity are considered normal due to variances in air and water temperatures. Actual temperatures will seldom match the chart exactly.

1. Run the ice machine a minimum of 10 minutes to allow the system to stabilize.
2. Catch the ice in a non-perforated container for 7 minutes and 12 seconds or for more accuracy 14 minutes and 24 seconds.
3. Weigh the container and ice, then deduct the weight of the container.
4. Convert ounces to pounds.
5. Example: 3 lbs. 12 oz. converts to 3.75 lbs.
6. (12 oz. ÷ 16 oz. =.75 lb.)
7. Determine the 24-hour ice production capacity.
    A. 7 minutes 12 seconds = Multiply the total ice weight by 200.
    B. 14 minutes 24 seconds = Multiply the total ice weight by 100.

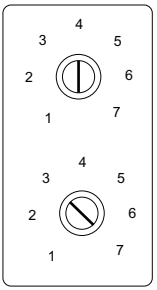

Thermostat Settings

Bin Thermostat:

The bin thermostat sensing bulb is located in the ice chute on modular models and in the bin thermostat holder on the right side of the bin on self storage models. The bin thermostat turns the ice machine on and off as the level of ice in the bin changes. Use the indicator on the ice machine label as the initial setting and adjust as required.

Evaporator Low Temperature Safety Thermostat:

The evaporator low temperature safety thermostat protects the ice machine if the evaporator temperature is too cold. Refer to chart for correct setting.

Bin Thermostat
Small Numbers = Less ice in bin
Large Numbers = More ice in bin
Start at Chart Setting, then adjust as required

Evaporator Low Temperature Safety Thermostat
Refer to chart for setting
Incorrect settings will cause ice machine to shut off prematurely

Thermostat Setting Chart

NOTE: Settings are for reference only. Factory setting is indicated on control label and overrides information listed on this page.

Troubleshooting

Diagnostic troubleshooting for the ice machine involves following flowcharts that are dependent on symptoms of the failed machine.

Follow the flowcharts for the failure symptom and model you are working on.

NOTE: Refer to the sequence of operation to determine where in the sequence the ice machine has failed. An example would be an ice machine that energizes the gear motor, but the compressor does not energize. Following the electrical flowchart will quickly and easily eliminate non issues.

UFF0200/UFF0350/UNF0200/UNF0300 Troubleshooting

SELF-CONTAINED AIR-COOLED

Normal Operation

When the toggle switch is placed in the “ON” position the following controls must be in the closed position before the ice machine will start:

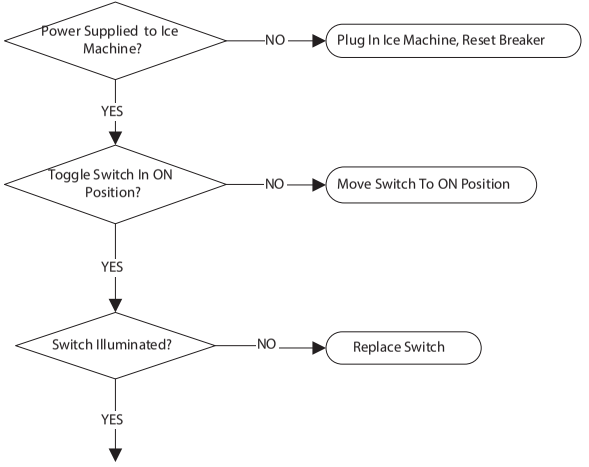

A. Bin Thermostat

B. Low Evaporator Temperature Thermostat

C. Low Water Level Switch

NOTE: Placing the toggle switch in the ON position starts the gear motor and refrigeration system. The float valve controls the water inlet valve and water level. The freeze cycle ends when ice contacts the bin thermostat. The ice machine will restart when ice no longer contacts the bin thermostat.

ROTATION SENSOR

RFF0620 / RNF0620 / RNF1100 / RNF1020C / RFF1300
RNF2000C / RFF2500

Light	Definition
Yellow Blinking	Time Delay Period
Yellow Solid	Normal Operation Sensing
Red Blinking 2 Flashes Per Second	Time Delay Period - First 1 To 7 Faults
Red Solid	Lockout - 8 Consecutive Faults Due To A Speed Fault Remove/Restore Power To Reset
Red Blinking Slowly	Lockout - 8 Consecutive Faults Due To A Short Circuit

Operation:

1. At start up, the sensor starts an 8 minute compressor time delay period.
2. After 8 minutes the sensor energizes the compressor contactor and ignores rotation for 20 seconds.
3. After 8-minutes, 20 seconds the auger rotation must not fall below 4 rpm or exceed 13 rpm; normal rotation is 9-10 RPM. When the auger rotation is less than 4 rpm or more than 13 rpm the sensor de-energizes the compressor contactor, starts an 8 minute time delay period and flashes the red led. When the 8 minute delay period ends the compressor will restart.
4. If the rotation sensor detects 8 consecutive RPM out of range failures the sensor locks out the compressor contactor and energizes the red led. The rotation sensor must be reset by cycling power off/on.

NOTE: Verify all electrical connections are secure and free of corrosion whenever rotation sensor lockouts exist.

LOW PRESSURE CUTOUT (LPCO) CONTROL

Model	Cut-Out	Cut-In
UFF0200 / RNF0320 RNF0620 / RFF0620 RNF1100 / RFF1300	7 psig ±2 (.5 bar ±.2)	36 psig ±2 (2.5 bar ±.2)

UFF0200 / UNF0200 UNF0300 / RNF0320 RFF0320 / UFF0350 RNF0620 / RFF0620 RNF1100 / RFF1300 RFF1300 / RFF2500	215 ±5 (14.8 bar ±.3)	232 ±5 (16 bar ±.3)
Remote condensing units do not have a fan cycle control.		

TOTAL SYSTEM REFRIGERANT CHARGE

This information is for reference only. Model/Serial plate information overrides information listed in this table.

Model	Refrigerant Charge
Flake Models	
UFF0200A	9.3 oz / 265 g
UFF0350A	11.3 oz / 320 g
RFF0320A	13.9 oz / 395 g
RFF0620A	20.8 oz / 590 g
RFF0620W	16.9 oz / 480 g
RFF1300A	21.9 oz / 620 g
RFF1300W	18.0 oz / 510 g
RFF1220C w/RCUF1200	156 oz / 4.42 kg
RFF2200C w/RCUF2200	240 oz / 6.08 kg
RFF2500A	67 oz / 1900 g
Nugget Models	
UNF0200A	8.5 oz / 240 g
UNF0300A	14.5 oz / 410 g
RNF0320	15.5 oz / 440 g
RNF0620A	18.3 oz / 520 g
RNF0620W	16.9 oz / 480 g
RNF1100A	23.3 oz / 660 g
RNF1100W	18.0 oz / 510 g
RNF1020C w/RCUF1000	160.0 oz / 4.54 kg
RNF2000C w/RCUF2200	240.0 oz / 6.08 kg

Model	Additional refrigerant required for 51' to 100' (15.5 to 30.5 m) line sets
RFF1220C	0 lbs 0 kg
RFF2200C	0 lbs 0 kg
RNF1020C	2 lbs 907g
RNF2000C	0 lbs 0 kg

FILTER-DRIERS

The size of the filter-drier is important. The refrigerant charge is critical. Using an improperly sized filter-drier will cause the ice machine to be improperly charged with refrigerant.

Important

Driers are covered as a warranty part. The drier must be replaced any time the system is opened for repairs.

SUCTION CLEANUP FILTER-DRIER

Contaminated systems must have a suction line filter-drier installed to remove contaminations. An access valve must be installed on the inlet side of the suction filter to allow pressure drop readings to be obtained.

Suction Line Clean-Up Filter		
Model	**Drier Size**	**End Connection Size**
All Models	UK-165S	5/8 in.

Charts

Ice Production & Refrigerant Pressure

These charts are used as guidelines to verify correct ice machine operation.

Accurate collection of data is essential to obtain the correct diagnosis.

- Zero out manifold gauge set before obtaining pressure readings to avoid mis-diagnosis.
- Discharge and suction pressure are highest at the beginning of the cycle. Allow system to stabilize for a minimum of 10 minutes, then verify the pressures are within the range indicated.
- Water temperature will affect suction and discharge pressure - 50°F (10°C) water temperature will result in pressures on the lower end of the ranges specified. 90°F (32°C) water temperatures will result in pressures on the upper end of the range specified.

RFF1220C QUIETQUBE HEAD SECTION

Refer to Nameplate for Voltage Rating

Connections

- A, B, & C connect to a remote panel when used - Jumper must be removed when remote panel is used
- 1 & 2 connect to line voltage
- 3 & 4 energizes remote condensing unit (RCU) refrigeration - 2 Amp max
- 5 terminal or junction block located on top of the junction box.
- 6 junction box at rear of ice machine

See page 146 for condensing unit wiring diagram.
